ISOPE SPECIAL SYMPOSIUM

Next Generation Gas Transport

Natural gas is becoming the fuel of choice due to a number of factors including energy security, dwindling supply of oil, and global environmental concerns. Economic transportation of gas is essential since gas reserves are often distant from the main markets.

The objective of the symposium is to provide a forum to discuss recent developments and commercial outlooks in gas transportation systems. Potential topics include Pressurized-LNG, LNG, Compressed Natural Gas (CNG), High Strength Pipelines, Gas-to-Liquids, and Gas Hydrates. The symposium will emphasize the current status and future challenges in these topics and others related to gas transportation.
